Summary

Product Operations professional with 4+ years at the intersection of **Product** × **Operations** × **Data**. I embed with operational teams (warehouse, sales, supply chain, accounting) to surface problems, use **data for root-cause analysis and prioritization**, and convert them into **standardized, reusable product capabilities** – coordinating Product, Technology and Operations from problem to measured impact. Results: **40% process-time cut** at 97% adoption, **8,000+ SKUs standardized**, same-day inventory visibility across warehouses and stores.

Experience

Product Operations & Data | Jemmia Diamond **Sep 2023 – Present**

- **Slashed stock-check time ~90%** (2h → 15 min per site): deployed RFID auto-scanning across warehouses & stores and pre-cached inventory to bypass a slow API – **same-day stock visibility and auditable inventory accuracy** for 50+ Sales & Supply Chain staff.
- **Rebuilt product master data for scale**: every incoming product spawned a **new catalog entry** – root-caused broken SKU/variant rules, defined the taxonomy and product-vs-variant creation policy, restructured **8,000+ SKUs** – ~70% fewer lookup errors across 4 departments.
- **Fitted the POS/OMS to the real selling process** (Haravan) and authored the operating docs – 40+ sales staff onboarded in days with near-zero support tickets.
- **Consolidated fragmented product data** into a governed 40+ table product hub (NocoDB, R2 media lake, CDC) built as a **reusable capability – new teams onboard without rework** – saving R&D, Marketing and Supply Chain ~10 hours/week of reconciliation.
- **Doubled customer-care speed with Salesaya**: sales had **no per-customer scripts** and lost hours screening inbound messages – built a messaging-app assistant that loads customer history, enriches social profiles, **suggests personalized replies** and pulls quotes/product info in-app – care time **2x faster**, 100% sales satisfaction.
- **Created the missing QC video flow**: incoming products had no test-shooting or video records – designed the workflow with structured updates, **receiver sign-off** and auto-delivery – every batch now has traceable, verified evidence.
- **Bridged Operations, Product & Technology** on the buy-vs-build call and ERPNext rollout (5+ custom modules, 6 integrated systems, CI/CD, change management) – **cut process time 40% at 97% adoption** company-wide.
- **Resolved the Sales ↔ Accounting payment dependency**: per-order QR codes auto-post transactions to the ERP ledger in real time – replaced screenshot-and-call reconciliation.
- **Democratized data-driven decisions**: built a 500K rows/day platform (12+ sources, 200+ dbt models) and 30+ dashboards covering 100% of key metrics; offloaded ~80% of ad-hoc requests to self-service BI + an AI agent – executive decisions **3x faster**.

Data Analyst (Contract) | BabyBet (Startup) **Jul 2023 – Mar 2024**

- **Owned the go/no-go feasibility assessment** for a mobility venture: delivered 10+ demand, pricing, unit-economics and risk analyses on 5+ competitors – steered leadership away from a mispriced market entry.

Analytics Engineer | AVLI Group JSC **Sep 2022 – Jul 2023**

- **Halved customer-care and lookup time (50%)** for 25+ sales staff by shadowing their manual Excel workflows and shipping a low-code CRM (AppSheet) with a future-feature roadmap.
- **Automated data ingestion** for 8+ sources (AWS Lambda, Airbyte) – 300K+ property records into PostgreSQL, replacing weeks of manual collection.
- **Designed a 15-table star-schema warehouse** (Airflow-orchestrated) as the single source of truth for customers, properties and interactions.
- **Delivered 10+ Looker dashboards** on demand, inventory and sales performance – used weekly by 25+ users to prioritize leads and listings.

Data Research Assistant | AISIA Research Lab **Jun 2022 – Jan 2023**

- **Improved ASR accuracy ~12%** (Wav2Vec 2.0) by labeling 80+ hours of Vietnamese speech, QA-ing model outputs and proposing new training-data sources.

Education

University of Information Technology, VNU-HCM **2019 – Jun 2023**
Bachelor of Data Science Ho Chi Minh City, VN
GPA: 7.9/10

Skills

- **Product & Operations:** problem framing & root-cause analysis, process gap / system constraint / dependency analysis, business needs → product requirements, prioritization, SOP standardization & rollout, change management, documentation & training, stakeholder management
- **Warehouse & Supply Chain:** multi-site stock counting (RFID), inventory accuracy, replenishment analytics, SKU/barcode master data, POS/OMS
- **Data & Analytics:** SQL, Python, Excel, data-driven decision making, KPI & metric design, inventory & time-series analytics, Looker, Metabase
- **Data Engineering:** dbt, Dagster, Airflow, Airbyte, dlt, n8n, ETL/ELT, AWS Lambda, webhooks, CDC
- **Systems:** ERPNext, Odoo, Haravan, NocoDB, PostgreSQL, Cloudflare R2, REST APIs, Docker, CI/CD
- **AI:** LLM APIs, AI agents, RAG

Personal Projects

Mini Lakehouse (Apache Iceberg Lab) **2026**
Technologies: Apache Iceberg, Spark (PySpark), Trino, Polaris, MinIO, Parquet, Docker repo

- Built a multi-engine lakehouse where Spark and Trino share Apache Iceberg tables via a Polaris REST catalog over MinIO, covering partitioning, time-travel, COW/MOR and table maintenance end-to-end.

FB Feed Crawler (Market Monitoring Platform) **2026**
Python, FastAPI, PostgreSQL, Docker repo

- **Market signals on Facebook were manual and inconsistent** → built a crawler platform with 3-engine fallback, daily scheduling and crash recovery – turning scattered feeds into structured data for market and pricing analysis.

Self-Hosted ERP Deployment (Frappe/ERPNext) **2026**
Docker, Linux, CI/CD, Backup & Recovery repo

- **Researched and productionized a self-hosted ERP** (Frappe/ERPNext): containerized deployment, automated backups and recovery drills – the lab behind the ERPNext rollout at Jemmia (custom modules, integrations, release process).
