TRAN NHAT NAM

Product Data Engineer | Ho Chi Minh City, Vietnam

+84 832255586 | nam.trannhat067@gmail.com | linkedin.com/in/nam-tran-nhat | github.com/namtran067

Summary

Product Data Engineer with 4+ years of experience creating **end-to-end data solutions** – from **ETL/ELT pipelines** and **data platforms** to **data governance, BI and AI applications**. More than a technician: I dive deep into the business needs of each department (Sales, Marketing, Finance, BOD) to turn data into decisions – **cutting ETL operational cost by 90%**, **consultation time by 60%**, and **accelerating decisions up to 3x**. Experienced in data modeling, stakeholder collaboration and integration with Odoo, ERPNext, Haravan and BizFly.

Technical Skills

- **Languages:** Python, SQL, JavaScript
- **Data Engineering:** ETL/ELT, dbt, Dagster, Airflow, Airbyte, dlt, n8n, Apache Kafka, Docker, GitHub Actions, CI/CD
- **Databases & Warehouses:** PostgreSQL, BigQuery, Databricks, ClickHouse, Apache Doris, StarRocks, dimensional modeling, data lineage, vector databases
- **BI & AI:** Looker, Metabase, Power BI, Looker Studio, LLM APIs, prompt engineering, RAG / vector search, AI-assisted development
- **Cloud & Integration:** AWS Lambda, Cloudflare, REST APIs, web scraping, Odoo, ERPNext, Haravan, BizFly, AppSheet, Lark Suite, WordPress
- **Stakeholder Communication:** user-friendly dashboards, executive presentations, translating business requirements into technical specs

Experience

Senior Data Engineer | Jemmia Diamond **Sep 2023 – Present**

- **Architected the centralized data platform:** unified ingestion (Haravan, ERP, warehouse scanning, Google Ads, GA4, Facebook Ads) via dlt, Airbyte and n8n into PostgreSQL; orchestrated with Dagster; dbt medallion modeling (raw → staging → marts); **cut ETL effort by 90%** versus legacy Lambda scripts.
- **Championed data governance & quality** across departments: standardized product definitions, SKU/variant rules and naming conventions; wrote **dbt tests** and validation checks on critical marts; documented **data lineage** with dbt docs; reorganized Lark Base data and built mini ETL flows delivering clean data back to department workspaces.
- Rebuilt the company CRM on **BizFly** (migrating from **Odoo** with full data standardization and backfill), then led the ERP transition to **ERPNext** – rollout planning, production deployment with **CI/CD**, and **REST API** source-system integration. Result: **100% consolidated customer information** with a clear end-to-end journey.
- Built BI for Sales, Marketing, Finance and BOD on Looker, migrated to Metabase with fine-grained permissions and an AI-powered natural-language Q&A layer – **enabling strategy shifts up to 3x faster**.
- Built AI-driven data products: optimized SQL/data marts for **Salesaya (AI sales assistant), cutting consultation time by 60%**; streamed conversations via **Apache Kafka** into a vector DB for RAG analysis; owned CI/CD and Docker deployments.

Data Analyst | BabyBet (Startup) **Jul 2023 – Sep 2023**

- **Collected and consolidated market & competitor data** (Grab, be) from market-intelligence platforms, surveys and secondary research into structured datasets for analysis.
- **Built reports and analyses** on demand, willingness-to-pay, pricing and unit economics to assess the venture's feasibility.
- **Communicated insights cross-functionally** to shape phased strategy and inform the go/no-go decision.

Data Analyst | AVLI Group JSC **Feb 2023 – Jul 2023**

- **Built scraping & ETL pipelines** on AWS Lambda (Python, BeautifulSoup, REST APIs) to extract property and customer data from batdongsan.com into PostgreSQL, with Zapier-fed Excel, Sheets and CSV sources.
- **Designed a dimensional data warehouse** (star schema) modeling customers, properties and interactions as a single source of truth, with scheduled loads orchestrated via Airflow.
- **Built a low-code CRM on AppSheet** (customer tracking, attendance, call logging for customers/landlords, apartment images, care history) – **cutting customer-care and property-lookup time by 50%**.
- **Delivered Looker dashboards** for customer demand, inventory and sales performance.

Data Research Assistant | AISIA Research Lab **Jun 2022 – Jan 2023**

- Labeled and curated Vietnamese speech data and contributed to optimizing **deep-learning ASR models** (Wav2Vec 2.0 / transformer-based) to advance Vietnamese speech-to-text, benchmarking against FPT's solution.

Personal Projects

Personal Data Platform (Mini Lakehouse) **2024**
Technologies: Python, dbt, Dagster, DuckDB, Docker repo

- Built an end-to-end mini data platform replicating a production architecture: ingestion → medallion layers (bronze/silver/gold) → analytics, orchestrated with Dagster and modeled with dbt (incl. tests and docs).
- Containerized the stack with Docker; documented data lineage with dbt docs as a self-serve data catalog.

Vietnamese RAG Knowledge Assistant **2024**
Technologies: Python, LLM APIs, ChromaDB, FastAPI repo

- Developed a retrieval-augmented Q&A assistant over Vietnamese notes: chunking, embeddings and vector search, served via a FastAPI endpoint.
- Evaluated retrieval quality and prompt strategies to improve answer accuracy.

E-commerce Price Tracker **2023**
Technologies: Python, Scrapy, PostgreSQL, Metabase repo

- Built a daily scraper tracking product prices across multiple e-commerce sites; stored in PostgreSQL and visualized price trends in Metabase dashboards.
- Added alerting on price drops to support buying decisions.

Vietnamese Speech-to-Text Experiment **2022**
Technologies: Python, Docker, HuggingFace, Label Studio repo

- Fine-tuned an ASR model on Vietnamese audio; built labeling workflows and evaluated word error rate (WER) on a held-out test set.

Education

University of Information Technology **2019 – Jun 2023**
Bachelor of Data Science Ho Chi Minh City, VN
GPA: 8.5/10 | IELTS 7.0
