TRAN NHAT NAM

Product Data Engineer | Ho Chi Minh City, Vietnam

+84 832255586 | nam.trannhat067@gmail.com | linkedin.com/in/nam-tran-nhat | github.com/namtran067

Summary

Product Data Engineer with 4+ years of experience creating **end-to-end data solutions** – from **ETL/ELT pipelines** and **data platform architecture** to **data governance, data quality, BI and AI applications**. More than a technician: I dive deep into the business needs of each department (Sales, Marketing, Finance, BOD) to turn data into decisions – **cutting ETL operational cost by 90%**, **consultation time by 60%**, and **accelerating decisions up to 3x**. Strong in data modeling, stakeholder communication, cross-functional collaboration, technical documentation and integration with Odoo, ERPNext, Haravan and BizFly.

Technical Skills

- **Languages & Query:** Python, SQL, Git
- **Data Engineering:** ETL/ELT, batch & streaming pipelines, dbt, Dagster (orchestration), Airbyte, dlt, n8n, Apache Kafka, AWS Lambda, Docker, CI/CD
- **Data Architecture:** PostgreSQL, BigQuery, medallion architecture (raw/staging/marts), dimensional modeling, data lineage & catalog (dbt docs), vector databases
- **Data Quality & Observability:** dbt tests, data validation, Sentry monitoring, data freshness SLAs
- **BI & AI:** Looker, Metabase, Looker Studio, LLM APIs, prompt engineering, RAG / vector search
- **Business Systems & Integration:** Odoo, ERPNext, Haravan, BizFly, AppSheet, Lark Suite, REST APIs, web scraping, WordPress
- **Soft Skills:** stakeholder communication, cross-functional collaboration, technical mentorship, documentation, problem-solving, project ownership

Experience

Senior Data Engineer | Jemmia **Sep 2023 – Present**

- **Architected the company's centralized data platform:** unified ingestion from Haravan, ERP, warehouse scanning and ad platforms (Google Ads, GA4, Facebook Ads) via dlt, Airbyte and n8n into PostgreSQL; orchestrated with Dagster; transformed data through a **medallion architecture** (raw → staging → marts) with dbt; **cut ETL development effort by 90%** versus legacy Lambda scripts.
- **Built data quality into the pipeline:** wrote **dbt tests** and validation checks on critical marts, set up **Sentry-based observability and alerting** to catch failures early, and documented **data lineage** with dbt docs as the company's **data catalog**.
- **Championed data governance** across departments: standardized product definitions, SKU/variant rules and naming conventions; reorganized internal Lark Base data and built mini ETL flows delivering clean data back to department workspaces; trained teams and documented standard usage rules.
- **Streaming & AI data products:** captured customer conversations via **Apache Kafka webhooks**, scored them against 8 criteria with LLM prompts and indexed them into a **vector database** for RAG-based analysis; built an **AI-powered natural-language Q&A layer** over the warehouse; scraped Facebook audience data (Custom Lens) into the warehouse.
- Rebuilt the company CRM on **BizFly** (migrating from **Odoo** with full data standardization and backfill), then led the ERP transition to **ERPNext** – rollout planning, production deployment with **CI/CD**, and **REST API** source-system integration. Result: **100% consolidated customer information** with a clear end-to-end journey.
- Delivered BI for Sales, Marketing, Finance and BOD on Looker, migrated to Metabase with fine-grained permissions – **enabling strategy shifts up to 3x faster**; **mentored and guided the dev team** through rollout phases; owned CI/CD and Dockerized deployments for data and company projects.

Data Analyst (Startup) | BabyBet **Jul 2023 – Sep 2023**

- Conducted market research and surveys; **automated competitor data scraping with Python** (e.g., Grab) to analyze cost of goods, margins and operating expenses.
- Delivered AI-assisted analyses and dashboards that guided product strategy and pricing decisions for the startup.

Data Analyst | Avli Group JSC **Feb 2023 – Jul 2023**

- **Built automated ETL flows** (Python, AWS Lambda, Zapier) for apartment and customer data, achieving **2x faster processing** than manual Excel workflows.
- Designed and maintained **dimensional data models**, dashboards and reports in BigQuery and Looker Studio tracking apartment inventory and individual sales performance; **boosted apartment-check efficiency by 50%**.
- Integrated the database with **AppSheet via REST APIs** to build the company's CRM app for product management.

- Delivered ad-hoc analyses and dashboards that shaped leadership strategy; built the corporate website with WordPress.

Data Research Assistant | ASIA Research Lab **Jun 2022 – Jan 2023**

- Contributed to a Vietnamese Speech-to-Text project: proposed data-source strategies and **built audio-text labeling workflows with Label Studio**.
- **Trained and evaluated ASR models** with Python and Docker on Vietnamese speech data.

Education

University of Information Technology **2019 – Jun 2023**
Bachelor of Data Science Ho Chi Minh City, VN
GPA: 8.5/10
Relevant Coursework: Relational Databases, Big Data, Machine Learning, Computer Vision

Certificate

- **IELTS**: 7.0
